

Màquia Serveis Ambientals, pioneer in the design, testing and manufacture of flexible devices specially adapted for tagging of wildlife within the different works of research, study and preservation of wildlife.

Our product line includes equipment and accessories for the correct management and also the most appropriate recollection systems for each species.

With the bird wing tags wing we try to alleviate the difficulty to identify the birds in flight, especially during long periods of rest, when PVC rings are hidden between the pectoral feathers or when the bird positioned backwards the ornithologist. To solve these setbacks, and through the exchange of experiences of ornithologists of other countries such as U.S.A., Greece and Israel, these wing paw tags were designed for the reading of back-ventral DV Model Pat. 20070022. These wing tags gather of the advantages of the traditionally wing tags employed. Permit flight readings as humeral tags and adopt tje fixation system of conventional paw tags. Just like this, our devices are attached through this membrane which birds and bats have on their wings and due to limited nerve endings, practically, it do not cause pain to the animal at the time of drilling.

SOUPLE MARQUAGE DE LA FAUNE

Humeral Wing Tags

Patagial Tags

These requirements are closely linked to their habitat and the environment in which they feed and reproduce, being essential and have to be taken always into consideration before choosing the most suitable tagging system. The use of a color or size wing tagging can interfere seriously in the vital processes and seriously affect the species which we want to study and protect. Your correct choice can mean the difference between success and failure of our project or work.
