

Màquia Serveis Ambientals, pioneer in the design, testing and manufacture of flexible devices specially adapted for tagging of wildlife within the different works of research, study and preservation of wildlife.

Our product line includes equipment and accessories for the correct management and also the most appropriate recollection systems for each species.

Adapted Systems for the Tagging of Wildlife

Oftentimes it has been resorted the use of ear tags of livestock use for the individual marking of wild mammals. These devices present a high rigidity, protruding the contour of the pavilions hearing and present really bright colours.

Even the use of notches or cuts have been practice to identify species, a method not recommended and which also limits the number of combinations, as well as the range of people who can assist the monitoring.

Our ear tags are made using plastic sheeting from the designs, shapes and colours recommended by the specialists of each species. Its fixing system prevents protruding beyond the outline of the animal and prevent tears and snags with vegetation. Also, the range of available colours and shapes allow these tags to adapt to the shape of the hearing panel of each species, imitating the flexibility of the cartilage which supports.
