

INTERDIGITAL TAGS FOR PINNIPEDS

Seals and other pinnipeds

Màquia Serveis Ambientals, pioneer in the design, testing and manufacture of flexible devices specially adapted for tagging of wildlife within the different works of research, study and preservation of wildlife.

Our product line includes equipment and accessories for the correct management and also the most appropriate recollection systems for each species.

Again in the study and conservation projects of seals and other pinnipeds, the use of livestock tags has been resorted for the individual tagging of these marine mammals. These devices have high rigidity and its size makes difficult the identification of the specimens.

Adapted Systems for the Tagging of Wildlife

Our tags are manufactured with flexible plastic sheets and are equipped with high durability in the hard marine conditions. A big range of sizes allows the use in any species, from the large sea elephant to the small sea otter. Beside the possibility of having any color and shape, its flexibility respects fully the membrane that sustains.

If you have any questions please contact us , as Màquia does not only offers you advice, but it also puts you in touch with those customers with whom you can share experiences and ask your doubts.
