

Màquia Serveis Ambientals, pioneer in the design, testing and manufacture of flexible devices specially adapted for tagging of wildlife within the different works of research, study and preservation of wildlife.

Our product line includes equipment and accessories for the correct management and also the most appropriate recollection systems for each species.

Our vertebral tags of high durability fix with an adhesive to the vertebral plate of sea turtles, tortoises and other chelonians, allowing the remote identification of species in different studies and conservation projects.

Our vertebral tags are made of flexible plastic sheets and are equipped with high durability for the hard environmental conditions. A big range of sizes allows the use in any species, from the big marine chelonians to the freshwater turtle's species.

### Adapted Systems for the Tagging of Wildlife

Màquia has models suitable for mounting on the waterline, in the bony plates of crocodiles and alligators, allowing the identification and monitoring even inside the water.

*If you have any questions please contact us , as Màquia does not only offers you advice, but it also puts you in touch with those customers with whom you can share experiences and ask your doubts.*
